

Lectures on Numerical Optimization by Examples and Codes

Gabriele Ciaramella, Christian Jäkle, Georg Müller, Stefan Volkwein

September 30, 2021

Contents

I Optimization 1: Unconstrained Optimization	7
1 Introduction	9
1.1 Motivation – Stay healthy with optimization	9
1.2 Basic notions in optimization	12
Appendices	15
2 Optimality conditions	17
2.1 Introduction	17
2.2 Optimality conditions	19
2.2.1 First-order necessary optimality conditions	19
2.2.2 Second-order optimality conditions	21
3 Convexity and convex optimization	27
3.1 Introduction	27
3.2 Convex optimization	28
4 Descent methods and step size strategies - Part 1	37
4.1 Introduction	37
4.2 Descent methods and introduction to step size strategies	40
4.2.1 Descent methods	42
4.2.2 Introduction to line-search strategies	43
Appendices	46
5 Descent methods and step size strategies - Part 2	49
5.1 Introduction	49
5.2 Armijo rule	52
6 Descent methods and step size strategies - Part 3	61
6.1 Introduction	61
6.2 Wolfe rule (or Wolfe-Powell rule)	64
7-8 Steepest descent and conjugate gradient methods	73
7-8.1 Introduction – Win the battle or the war?	73
7-8.2 Steepest descent method a.k.a. gradient method	73
7-8.3 Conjugate gradient method	77
7-8.3.1 From the problem of steepest descent to the method of A -orthogonal directions	77
7-8.3.2 Computation of A -conjugate directions	81
9 Rates of convergence	87
9.1 Introduction	87
9.2 Rates of convergence	89
9.2.1 Orders of convergence	90
9.2.2 Characterization of superlinear convergence	93

10 Newton's method - Part 1	97
10.1 Introduction – Math is art... and Newton's method is an artist brush!	97
10.2 Local Newton method	101
11 Newton's method - Part 2	109
11.1 Introduction	109
11.2 Globalized Newton methods	114
12 Quasi-Newton methods	125
12.1 Introduction	125
12.2 Quasi-Newton methods	126
II Optimization 2: Constrained Optimization	135
13 Optimality conditions for constrained optimization – Part 1	137
13.1 Constrained optimization problems	137
13.2 The tangent space	140
13.3 First-order necessary conditions for equality constraints	141
13.4 Second-order optimality conditions for equality constraints	145
14 Optimality conditions for constrained optimization – Part 2	151
14.1 Constrained optimization problems	151
14.2 Duality	157
14.2.1 The dual problem	157
14.2.2 Weak and strong duality and saddle points of the Lagrange function	158
15 Introduction to linear programming	163
15.1 Bases, basic points and basic feasible points	165
15.2 Geometry of the feasible set	167
15.3 Dual linear programming	169
15.4 KKT system and sufficient optimality conditions	170
16 Simplex method in linear programming	173
17 Interior-point methods for linear programming – Part 1	175
17.1 Primal-dual methods	175
17.2 Feasible primal-dual methods	181
18 Interior-point methods for linear programming – Part 2	187
18.1 Feasible primal-dual methods	187
18.2 Infeasible primal-dual methods	194
19 Quadratic programming – Part 1	201
19.1 Quadratic programs with equality constraints	201
19.2 Numerical solution of KKT systems	204
19.2.1 Direct methods	204
19.2.2 Iterative methods	208
20 Quadratic programming – Part 2	213
20.1 Quadratic programs with inequality constraints	213
20.2 Interior-point methods for quadratic programming	214
21 Penalty methods	221
21.1 Quadratic penalty method	221
21.2 Nonsmooth penalty methods	229

22 Augmented Lagrangian method	233
22.1 Properties of the augmented Lagrangian method	235
22.2 Convergence of the augmented Lagrangian method	237
23 Nonlinear problems with box constraints – Part 1	241
23.1 Necessary optimality conditions	242
23.2 Sufficient optimality conditions	246
24 Nonlinear problems with box constraints – Part 2	249
24.1 Projected gradient method	249
24.2 Projected Newton method	255
25 Sequential quadratic programming – Part 1	263
25.1 Local SQP method	263
25.2 Merit functions and line-search globalization	267
26 Sequential quadratic programming – Part 2	275
26.1 Full quasi-Newton approximations	275
26.2 Reduced quasi-Newton approximations	280
